**FUNCTIONAL DAIRY PRODUCTS AND APPAREL,  
BUILT WITH EFFICIENCY AND VALUE IN MIND**

## Microfiber Dairy Towel

**BetterMilk microfiber dairy towels are superior to cotton towels for the following reason:**

1. 4 times more absorbent than cotton towels
2. More durable and will remain softer than cotton towel.
3. Produce no lint in the drier.
4. Fibers provide an ideal cleaning surface for teats.
5. Requires less energy to dry than cotton towel.
6. Effective wet or dry.

### **Sizes and Colors**

- ✓ Rugged oxford polyester outer shell
- ✓ Water repellent polyurethane coating
- ✓ Soft taffeta nylon inner lining
- ✓ Adjustable heavy duty buckle leg straps
- ✓ Insulated
- ✓ Machine Washable

Available in **Holstein** and **Jersey** Sizes

### **Why Use A Calf Coat?**

Cows are bred all year long but that is not the way Mother Nature planned it. Calves were not made to born in the winter; the calf needs more energy in the winter to maintain its body temperature. For its first six weeks of life, a calf does not have enough body fat to maintain its own body temperature without extra energy. Feeding calves can be expensive and you want as much of that feed to go towards growth as possible.

This is where calf coats, (calf jackets or blankets) come in. Calf coats help direct that energy into calf growth instead of maintaining body temperature. Calf coats provide the additional layer of insulation mother nature did not.

A better Calf coat does an excellent job of cutting the wind and repelling moisture, allowing the calf to maintain body heat. Lightweight water repelling polyurethane coating outer shell is mildew and abrasion resistant. The coat inner lining is soft taffeta nylon. Adjustable Velcro front closure and quick-release rear leg buckles for easy on and off. Fully adjustable rear leg straps for custom fit and ease of movement. Machine wash and dry.
